

So tell me, why does this

SOUND BETTER?

QUEST
Acoustical Interiors

Why do these theaters sound better?

Is it because the audio components and speakers are outrageously expensive?

No. We used a basic AV receiver and speakers in each of these rooms.

Is it because we used affordable Quest Cinema Series acoustical treatments?

Of course, but there is more.

It is the simplest of reasons:

The speakers are sitting in the exact spot in the room where they sound best. Not very “high tech” but very “high end”.

Any audiophile will tell you, “For the best sound, pull the speakers out from the wall!” It isn’t rocket science, but it is acoustical science.

The best system is one where the technician has painstakingly moved the speakers inch by inch until the best sonic results are attained.

Use one of Quest’s acoustically transparent “AT” stage walls and columns for “high end” results.
