

Have Sencore Audio Analyzer -Will Travel...

Precision in home audio calibration is now available to Widescreen Review readers!

90% of audio calibrations are performed as part of a new complete custom installation, but these calibrators will also perform precision on site set up of audio systems you already own. You can get your theater or two channel audio system calibrated simply by calling one of these Sencore Sound Analyzer equipped calibrators! Why settle for anything less than the very best your theater's audio system is capable of producing?

The vast majority of HAA Dealers are custom installers who specialize in complete system integration. Their services routinely include not only audio calibration, but home automation, acoustical room analysis and video calibration as well.

Sencore, Inc., (www.sencore.com), a 50 year old precision instrumentation company, is sponsoring this program to introduce Widescreen Review readers to audio calibrators who work on systems around the world.
